

Participatory earth system governance for emergency program in Indonesia

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=114166&lokasi=lokal>

Abstrak

Earth system governance can be understood as a political economic project that engages more and more actors who seek to strengthen the current architecture of institutions and networks at local and global levels. While involving participation in the system has emerged in the last two decades, the policy-making in any area is not merely a question of rationally choosing the right decisions in a technocratic, value-free manner, but is more fundamentally shaped by contest between competing interests. This essay assesses some of the major premises of neo-institutionalism explanations of earth system governance and participation practices with regard to the recent and ongoing Indonesia experience with many natural disasters, such as earthquake, mud volcano, and Tsunami.
