

## Aktivitas antimutagen isoflavon glikosida hasil transglukosilasi enzimatis CGT - ase bacillus macerans : Antimutagen activity of synthesized isoflavone glycoside by enzymatically transglycosylation

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=122252&lokasi=lokal>

---

### Abstrak

It has been known that isoflavone have biological activities such as antioxidant, antibacteria, antimutagenesis, and anticancer. Isoflavone aglycone uses such as genestein, daidzein and glycitein are limited since they are unstable and uneasily to dissolve in water....
