

dampak deraan kekeringan pada fase inisiasi bunga, fase berbunga dan fase pembentukan polong terhadap pembentukan bunga dan buah pada empat varietas vigna radiata

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=122260&lokasi=lokal>

Abstrak

One of the greatest affected factors towards the growth of V. radiata is considered as the availability of water. Obviously, less production of V. radiata is due to short water supply....
