

Strategi pengembangan industri biodiesel berbasis kelapa di Maluku

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=129104&lokasi=lokal>

Abstrak

Biodiesel is an alternative fuel that can be produced from coconut oil through transesterification process using methanol and sodium hydroxide (NaOH) as catalyst. Nowadays, the development of biodiesel is urgently required to reduce people's burden due to the price and the uncertain supply of diesel fuel in small and remote islands....
