

Efektivitas irigasi tetes untuk mendukung optimalisasi pengelolaan air tanah di lahan kering studi kasus desa Akar-Akar, Lombok Utara, Nusa Tenggara

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=129885&lokasi=lokal>

Abstrak

West Nusa Tenggara is dry land with sandy clay texture and undulating topography, very low rainfall, but very potential to be developed into productive agricultural land due to be supported by ground water resources. Research carried out in order to find the model development and management of drip irrigation systems to support the optimization of ground water management in dry land....
