

Potensi pengembangan produk pangan fungsional berantioksidan dari makroalga dan mikroalga

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=130073&lokasi=lokal>

Abstrak

Indonesia has great potential resources of algae, but its production level is still less than 50% of the potency. Algae which are beneficial for production consist of only several of its hundred total species. The benefit of algae is still limited as sources of agar, carrageenan and alginate....
