Potensi pengembangan produk pangan fungsional berantioksidan dari makroalga dan mikroalga

Deskripsi Lengkap: https://lib.ui.ac.id/detail?id=130073&lokasi=lokal

Abstrak

Indonesia has greatpotential resources of algae, but it production level is still less than 50% of the potency. Algae which are benefit for production consist of only several of its hundred total species. The benefit of algae is still limited as sources of agar, carrageenan and alginate....
