Virtualisasi sebagai Solusi dalam Efisiensi Perangkat Server dalam Organisasi

Deskripsi Lengkap: https://lib.ui.ac.id/detail?id=131506&lokasi=lokal

----

Abstrak

Virtualization is a term that refers to the abstraction of computer resources on single computer controlled by Virtual Machine Monitor (VMM). Virtualization concept has to sideways, namely platform virtualization and application virtualization. This activity can be used for server consolidation, disaster recovery, validation, and new server testing. This technology can increase the utilization and flexsibility from physical resources to function as multiple logical operating system and application.
