Abstrak

Tulisan ini hendak berargumen bahwa Amerika Serikat mempunyai pengaruh mendalam dalam konvensi perubahan iklim Protokol Kyoto. Melalui Productive power, Amerika Serikat mampu terlibat dalam setiap keputusan yang dihasilkan dalam konvensi ini. Selain itu productive power Amerika Serikat juga mampu mengontrol segala bentuk aturan dan mekanisme yang berjalan di dalam konvensi termasuk rezim yang berlangsung. Rezim perubahan iklim yang berlangsung dewasa ini mempunyai kekurangan sehingga mengakibatkan ketidakefektifan proses konvensi.

.....This paper will argue that productive power of United States has deeper influence on the climate changes convention of Kyoto Protocol. Through productive power, United States could insist in every decision of the convention. Besides, productive power of United States also could control every single rules and mechanism which happen on the convention, include the regime which exist. As we know that climate change regime which happens today has its weakness so that it has impact to the infectivity of the convention process.
