Abstrak

Indonesia telah memiliki perangkat sistem rating GREENSHIP 1.0 sebagai panduan penilaian green building untuk menguji tingkat pemahaman tentang konsep green building serta menilai atau mengevaluasi bangunan hijau di Indonesia dengan tujuan untuk meningkatkan mutu kualitas dan sektor industri bangunan di tanah air.

Arsitektur berkelanjutan merupakan konsep yang mendasari praktik green building, lalu apakah poin penilaian green building dalam sistem rating GREENSHIP 1.0 telah sepenuhnya menerapkan strategi berkelanjutan - Ternyata tidak, lalu bagaimana dengan kondisi di lapangan, apakah strategi berkelanjutan non-kualifikasi GREENSHIP 1.0 diterapkan juga oleh bangunan di Jakarta yang mengusung konsep green building.

Indonesia already has a green building rating system tools named as GREENSHIP 1.0 which is used as guides to test the level of understanding the green building concept and to assess or evaluate green building in Indonesia with the main purpose is to improve the quality of construction industries in the homeland.

Sustainable architecture is the basic concept underlying the practice of green building and the question is, whether the green building rating points in the rating system GREENSHIP 1.0 has been fully implemented sustainable strategy' Apparently not, then what about the conditions on the ground, whether ongoing strategies of non-qualification GREENSHIP 1.0 also applied by building in Jakarta which brought the concept of green building.
