Abstrak

Human beings with their inherent intelligence can engage personally in a constructive way through various concrete actions in solving their various problems of life. Education will be able to sharpen the mind and thereby synthesizes the intelligence to enable both to produce strength to settle the human problems. Education will be able to assist improving their ability to formulate the goal of life and to organize as well as to manage various resources and to act as the means to be employed in conformity with their expected direction. Education assists to improve the ability of human being as a creature who uses languages and is able to store memories and make plans for his/her activities. Education stimulates and enriches imagination, and brings about the human being to awareness that a statement or idea must be based on individual responsibility and social life. Education gives a continues reconstruction of experiences and makes human aware that life means living with other people and gives the opportunity for the expected morale and mental growth.
