Abstrak

Kualitas kinerja perawat sangat menentukan dalam pemberian pelayanan keperawatan di puskesmas. Penelitian ini merupakan penelitian korelatif, bertujuan untuk mengidentifikasi hubungan kinerja perawat terhadap persepsi tentang undang-undang praktik keperawatan pada perawat puskesmas dengan desain cross sectional. Sampel dalam penelitian ini sebanyak 40 perawat puskesmas di Kecamatan Cilincing, Jakarta Utara. Teknik sampling yang digunakan ialah total populasi.

Hasil dari penelitian ini menyatakan bahwa ada hubungan antara kinerja perawat dan persepsi tentang undang-undang praktik keperawatan pada perawat puskesmas, dengan nilai p yang diperoleh sebesar 0,004. Jadi, kinerja perawat yang baik akan membentuk persepsi positif terhadap undang-undang praktik keperawatan.

.....Nurse's work performance determines quality of nursing care in Public Health Center. This descriptive correlative research aimed to identify the relationship of nurse's work performance with perception about nursing practice law in nurse at Public Health Center using cross sectional design. Sample of this research is 40 nurses in Public Health Center at Cilincing, North Jakarta. This research used total population sampling technique.

The result showed that there is relationship between nurse's work performance and perception about nursing practice law, with p value 0,004. It means that the nurse's work performance is good, the perception of nursing practice law will be positive.
