## Abstrak

Penelitian ini membahas tentang identifikasi tingkat pengetahuan ibu dan karakteristik lain, pelaksanaan Lima Imunisasi dasar Lengkap anak balita, dan pengaruh karakteristik ibu terhadap pelaksanaan Lima Imunisasi dasar Lengkap anak balita. Sampel penelitian berjumlah 93 orang dengan metode Purposive Sampling. Desain penelitian yang digunakan adalah deskriptif korelasi dengan instrumen penelitian berupa kuesioner.

Hasil penelitian berdasarkan analisis Chi Square menyimpulkan bahwa ada hubungan antara tingkat pendidikan ibu terhadap pelaksanaan Lima Imunisasi dasar Lengkap ( $p\text{-value} = 0,04$ ;  $\alpha = 0,05$ ) dan terdapat hubungan antara tingkat pengetahuan ibu terhadap pelaksanaan Lima Imunisasi dasar Lengkap ( $p\text{-value} = 0,035$ ;  $\alpha = 0,05$ ).

Hasil penelitian merekomendasikan optimalisasi peran perawat dan kader Posyandu dalam memotivasi dan menjelaskan pentingnya lima imunisasi dasar lengkap pada anak balita.

.....This research focused on identification of mother level of knowledge and other characteristic along with implementation of Five Complete Basic Immunization for children under five. A sample of 93 women was selected by Purposive Sampling method. This research is a descriptive correlation interpretive and is using questionnaire as instrument.

The research result is that there is correlation between education level of mother with implementation of five complete basic immunization ( $p\text{-value} = 0,04$ ;  $\alpha = 0,05$ ) and there is correlation between mother level of knowledge with implementation of five complete basic immunization ( $p\text{-value} = 0,035$ ;  $\alpha = 0,05$ ).

The researcher recommends nurses and cadre Posyandu to motivate and explained the importance of five complete basic immunization for children under five.
