Abstrak

Angka kematian dan kecacatan semakin meningkat akibat kesalahan dalam pemberian obat, dapat dicegah dengan supervisi secara optimal. Tujuan penelitian untuk mengetahui hubungan persepsi perawat pelaksana tentang supervisi pimpinan ruang dengan pelaksanaan SOP pemberian obat. Desain penelitian menggunakan rancangan cross sectional. Jumlah sampel penelitian 73 perawat pelaksana dan 12 pimpinan ruang. Hasil observasi pelaksanaan kegiatan supervisi pimpinan ruang (58,33%) tidak baik dan pelaksanaan sop pemberian obat (39,7%) tidak baik.

Hasil penelitian didapatkan tidak ada hubungan bermakna supervisi pimpinan ruang terhadap pelaksanaan SOP pemberian obat ($p = 0,566$). Upaya untuk meningkatkan pelaksanaan SOP pemberian obat dengan meningkatkan supervisi pimpinan ruang secara terencana dan terjadwal, penambahan fasilitas alat dan pendidikan non formal melalui pelatihan berkesinambungan.

Mortality and disability is increasing due to errors in drug administration can prevent with optimum supervision. The purpose of this study was to relationship between nurses staff? perceptions toward head nurses? supervision and the implementation of standard operating procedure for drug administration. This was a cross sectional study involving 73 nurse staff and 12 head nurses. It was observed that lack of an appropriate supervision led not good (58,33%) and to the implementation of drug delivery was also not good (39,7%).

It was found that there was no significant effect of head nurses? supervision and the implementation of standard operating procedures for drug administration ($p = 0.566$). Efforts to improve the implementation of standard operating procedures for drug administration could be done by a planned and scheduled head nurse?s supervision as well, to facilitates for drug administration and non formal education through continuous training.
