Abstrak

Perawat memegang tanggung jawab dalam pelaksanaan pemberian obat pada semua tatanan pelayanan yang berhubungan dengan faktor sistem dan faktor proses. Penelitian ini adalah penelitian kuantitatif, untuk melihat hubungan pelaksanaan metode tim keperawatan dengan kesalahan pemberian obat, dengan jumlah sampel 76 perawat. Analisa dengan chi square dan multiple logistic regression. Perawat yang melakukan kesalahan minimum pemberian obat 53%, dan ada hubungan antara pelaksanaan metode tim keperawatan dengan kesalahan pemberian obat ($p=0,004$; $=0,05$). Metode tim keperawatan sangat penting untuk pemberian obat yang aman. Rumah sakit perlu membuat kebijakan terhadap upaya keselamatan dengan merubah sistem dan pendidikan bagi perawat.

.....Medication administration is a key responsibility of nurses in many settings are systems factor and process factor. The study used the quantitative with correlation descriptive design with purpose to examine the relationship between team nursing and medication errors. This research used the descriptive correlation, with 76 nurses. Analysis was using chi square and multiple logistic regression. An approximately 53% nurses identified medication errors and there was a significant relationship of team nursing and medication errors ($p=0,004$; $=0,05$). Team nursing was very important for medication safety. Strategies used included recommendation from voluntary organization to improve safety system change and education of nurses.
