Abstrak

Latar Belakang: Prevalensi karies gigi anak di Indonesia yang tinggi disebabkan karena perilaku ibu yang buruk dalam menjaga kebersihan gigi anaknya.

Tujuan: Mengetahui peran lembar balik dan lembar evaluasi KMGS dalam merubah perilaku ibu terhadap kesehatan gigi mulut balita.

Metode: melakukan pelatihan kader menggunakan lembar balik, pemeriksaan kesehatan gigi mulut balita, kemudian dievaluasi setelah diintervensi menggunakan lembar evaluasi KMGS.

Hasil: terdapat peningkatan (57,15%) bermakna ($p < 0,05$) perilaku ibu pada kelompok intervensi, penurunan bermakna ($p < 0,05$) indeks plak (60%) dan skor kematangan plak (25,71%) anak.

Kesimpulan: media lembar balik efektif meningkatkan perilaku ibu.

.....Background: The high prevalence of early childhood caries in Indonesia is caused by mother's behaviour of maintaining children's oral hygiene.

Purpose: to know about the role of flipchart and KMGS in maintaining mother's behaviour toward children's dental health.

Methods: training for cadre by using flipchart, examination of children's dental and oral health and evaluating after the intervention by using KMGS.

Results: there's a significant improvement (57.15%) of mother's behaviour ($p < 0,050$) in intervention group, a significant reduction ($p < 0.05$) of child plaque index (60%) and plaque maturity score (25.71%).

Conclusion: flipchart is an effective media to improve mother's behaviour.
