Abstrak

Penelitian ini dilakukan untuk mendapatkan gambaran mengenai hubungan antara keberfungsian keluarga dan dukungan sosial pada remaja ketergantungan narkoba yang menjalani rehabilitasi. Pengukuran keberfungsian keluarga dilakukan dengan alat ukur Keberfungsian Keluarga yaitu McMaster Family Assessment Device (FAD) (Epstein, Ryan, Bishop, Miller, & Keitner, 2003) dan pengukuran Dukungan Sosial yaitu alat ukur Berlin Social Support Scale (BSSS) (Schwarzer & Schulz). Partisipan berjumlah 40 remaja ketergantungan narkoba yang menjalani rehabilitasi. Hasil penelitian ini menunjukkan bahwa ada hubungan yang signifikan antara keberfungsian keluarga dan dukungan sosial pada remaja ketergantungan narkoba yang menjalani rehabilitasi ($r = .666$; $p = .000$).

.....This research was conducted to find correlation between family functioning and social support among adolescent substance dependency taking rehabilitation. Family functioning conflict was measured using a modification instrument named McMaster Family Assessment Device (FAD) (Epstein, Ryan, Bishop, Miller, & Keitner, 2003) and social support was measured using a modification instrument named Berlin Social Support Scale (BSSS) (Schwarzer & Schulz).
