Abstrak

Perilaku keselamatan perawat terhadap bahaya agen biologik dapat meningkatkan dari mutu pelayanan. Supervisi klinik model reflektif interaktif dapat meningkatkan perilaku keselamatan perawat terhadap bahaya agen biologik. Penelitian bertujuan untuk mendapatkan pengaruh supervisi reflektif interaktif terhadap perilaku keselamatan perawatan pada bahaya agen biologik. Metoda yang digunakan adalah quasi experimental pre-post test with control group. Sampel penelitian (97 kontrol & 97 intervensi) diambil menggunakan teknik consecutive sampling.

Hasil penelitian didapat perbedaan antara kelompok yang diberi pelatihan dan tidak diberi pelatihan dan ditemukan adanya pengaruh supervisi reflektif interaktif terhadap perilaku keselamatan perawat. Kepala ruang perlu diberikan pelatihan supervisi agar dapat melakukan kegiatan supervisi dengan baik untuk peningkatan perilaku keselamatan perawat.

<hr>

Nurse safety behavior at biologic agent hazard can will affect to quality care. Reflective interactive supervision can improve quality of nursing practice. The research purpose to get descriptions of reflective interactive supervision towards to safety nurse behaviors at biologic agent hazard. Method used experimental pre-post test with control group. Consecutive sampling in data taking for 97 control and 97 intervention sampel.

The result suggest that there are difference between the trained group and the untrained group and there are a influence of reflective interactive supervision towards nurse safety behavior at biologic agent hazard. The head nursing need to be given supervision training in order to be able to supervise well for improving behaviors nurse safety at biologic agent.
