Abstrak

One of the main purposes of this study is to find out the relationship between marital satisfaction and infidelity tendency among husbands and wives who live in Jabodetabek. The research method used is quantitative research using the Inventory of Marital Satisfaction which consists of 11 domains constructed by Herfianti (2005) and the Infidelity Scale measuring 3 types of infidelity constructed by Drigotas (1999), which measures 3 types of infidelity. The sample size is 84 people consisting of 43 males and 41 females with an age range of 27-56 years.

The results showed that there is a relationship between marital satisfaction and emotional, and emotional physical infidelity. Interpersonal relationship, mutual interest, congruence between role and hope, relationship with laws, and power and attitudes toward marriage are the domains of marital satisfaction which have a significant relationship with emotional infidelity. The domains mutual interest, relationship with laws, and power and attitudes toward marriage found have a significant relationship with emotional physical infidelity. Among all those domains, relationship with laws has more contribution affected tendency in infidelity.

.....The purpose of this study is to find out the relationship between marital satisfaction and tendency in infidelity among husbands and wives who live in Jabodetabek. This study is a quantitative approach using the Inventory of Marital Satisfaction which consists of 11 domains which were constructed by Herfianti (2005) and the Infidelity Scale measuring 3 types of infidelity which was constructed by Drigotas (1999). The samples of this research are 43 males and 41 females between the ages of 27 and 56 years.

The results showed that there are a relationship between marital satisfaction and emotional, and emotional physical infidelity. Interpersonal relationship, mutual interest, Congruency between role and hope, relationship with laws, and power and attitudes toward marriage are the domains of marital satisfaction which have a significant relationship with emotional infidelity. The domains mutual interest, relationship with laws, and power and attitudes toward marriage found have a significant relationship with emotional physical infidelity. Among all those domains, relationship with laws has more contribution affected tendency in infidelity.
