#### Abstrak

Penelitian ini bertujuan untuk mengetahui faktor-faktor determinan yang berhubungan dengan perilaku penggunaan APD pada pekerja di Technical Services Department PT. Indo cement Tunggal Prakarsa, Tbk. Unit Plant Site Cirebon. Penelitian ini merupakan penelitian deskriptif analitik dengan pendekatan cross sectional dengan teknik total sampling. Penelitian dilakukan pada periode April sampai Mei 2013 dengan jumlah responden 54 orang. Analisis data menggunakan uji Chi-Square menunjukkan ada hubungan penggunaan APD dengan pengetahuan mengenai APD ( $p=0.038$ ), sikap penggunaan APD ( $p=0.046$ ), dan penerapan peraturan tentang APD ( $p=0.025$ ). Sebaliknya, tidak ada hubungan yang signifikan antara ketersediaan APD ( $p=0.571$ ), kenyamanan penggunaan APD ( $p=0.237$ ), dan pengawasan penggunaan APD ( $p=0.310$ ) dengan perilaku penggunaan APD pekerja Technical Services Department.

<hr><i>This purpose of this research is to find out the determinant factors related to behaviour usage of PPE to workers of Technical Services Department in PT. Indo cement Tunggal Prakarsa, Tbk. Cirebon Unit Plant Site. This research is a descriptive analytic cross sectional approach with total sampling technique. The study was conducted during the period April to May 2013 to the number of respondents are 54 people. Data analysis using Chi-Square test showed association with the use of PPE knowledge ( $p=0.046$ ), attitude of using PPE ( $p=0.038$ ), and PPE's regulation application ( $p=0.025$ ). Whereas, there are no significant relationship between availability of PPE ( $p=0.571$ ), comfort of using PPE ( $p=0.237$ ), and supervision ( $p=0.310$ ) between usage behaviour of PPE to workers of Technical Services Department.</i>
