## **Abstrak**

Penelitian mengenai emotional intelligence telah banyak dilakukan khususnya pada remaja ( misalnya Bracket & Katulak, 2006). Sayangnya, hingga saat ini belum ada penelitian mengenai hubungan emotional intelligence dan prestasi akademik pada siswa SMA yang dikhkusukan berdasarkan jurusan mereka di sekolah. Beberapa penelitian menjelaskan bahwa tingkat emotional intelligence remaja, menentukan hasil prestasi akademik mereka (Nasir & Masru, 2010; Nasir & Munaf, 2011).

Tujuan dari penelitian ini adalah untuk melihat gambaran, perbedaan serta hubungan antara emotional intelligence dan prestasi akademik pada siswa SMA kelas XI jurusan IPA dan jurusan IPS, serta untuk melihat perbedaan gender dalam emotional intelligence dan prestasi akademik. Penelitian dilakukan menggunakan pendekatan kuantitatif, pada 236 orang siswa SMAN 71. Untuk alat ukur emotional intelligence, digunakan Self-Report Emotional Intelligence Scale (SREIS).

Hasil penelitian menunjukkan bahwa tidak terdapat korelasi yang signifikan antara emotional intelligence dengan prestasi akademik pada siswa SMA pada jurusan IPA maupun IPS. Pada emotional intelligence tidak didapatkan perbedaan yang signifikan antara siswa laki-laki dan siswa perempuan baik pada jurusan IPA maupun IPS. Sedangkan pada prestasi akademik, secara signifikan siswa perempuan memiliki nilai rata-rata yang lebih tinggi dibandingkan dengan siswa laki-laki.baik pada jurusan IPA maupun IPS, dimana siswa perempuan memiliki nilai rata-rata yang lebih tinggi dibandingkan dengan siswa laki-laki.

.....Research about emotional intelligence has been done especially among adolescents (look for example Bracket & Katulak, 2006). Unfortunately, until now there has been no research about the relationship between emotional intelligence and academic achievement among high school students. Several studies have described that the level of emotional intelligence in adolescents determines their achievement performance (Nasir & Masru, 2010; Nasir & Munaf, 2011).

This research aims to find the relationship between emotional intelligence and academic achievement among the high school students, and to determine whether or not there is gender difference in emotional intelligence and academic achievement. Using quantitative approach, 236 high school student from SMA 71 participated in this study. For emotional intelligence measurement, the Self- Report Emotional Intelligence Scale (SREIS) was used.

The result shows that there is no significant correlation between emotional intelligence and academic achievement. For the gender difference, there is no significant difference between male and female students on emotional intelligence, both among science major students and social major students. But significant differences on academic achievement were found between male students and female students academic score, both among science major students and social major students with females have higher scores.
