Abstrak

Keselamatan pasien merupakan salah satu faktor penting di dalam pelaksanaan rumah sakit. Tujuan penelitian ini untuk melihat kesiapan penerapan keselamatan pasien di RSIA Assalam. Penelitian dilakukan dengan metode penelitian kuantitatif dan penelitian kualitatif. Metode survey dilakukan secara total sampling terhadap 59 pegawai, dan wawancara mendalam terhadap 5 informan. Hasil survey menunjukkan RSIA Assalam membudaya sedang dalam keselamatan pasien.

Dari hasil analisis menunjukkan belum siapnya RSIA Assalam dalam menerapkan budaya keselamatan pasien. Penelitian merekomendasikan penyusunan standar prosedur operasional tentang keselamatan pasien, meningkatkan jumlah pelaporan kejadian dan memberikan pendidikan dan pelatihan kepada seluruh pegawai tentang keselamatan pasien.

.....Patient safety is one of the important factors in the implementation of the hospital. The purpose of this study to look at the implementation of patient safety preparedness in Assalam RSIA. The research was conducted using quantitative research and qualitative research. Methods of sampling survey conducted to 59 employees total, and depth interviews with 5 informants. The survey shows RSIA Assalam being entrenched in patient safety.

From the analysis of the readiness of the application of patient safety culture in hospitals shows RSIA Assalam unprepared to implement patient safety culture. Study recommends the creation of standard operating procedures on patient safety, increase the number of reporting events and providing education and training to all employees about patient safety.
