**ABSTRAK
**

Family-work conflict (FWC) adalah salah satu bentuk inter role conflict yaitu tekanan atau ketidakseimbangan peran, antara peran di dalam keluarga dengan peran di pekerjaan. Salah satu dampak yang ditimbulkan dari family-work conflict adalah penurunan hasil kinerja yang ditandai dengan indikator meningkatnya absensi perawat perempuan diluar cuti tahunan dengan alasan ketidakhadiran karena kepentingan keluarga.

Tujuan dari penelitian ini untuk mengetahui hubungan antara family-work conflict yang terdiri dari time-based conflict, strain-based conflict dan behaviour-based conflict dengan kinerja pada perawat perempuan di RSUD Dr. R. Goeteng Taroenadibrata Purbalingga.

Metode penelitian ini menggunakan rancangan cross sectional dengan sampel sebanyak 78 responden perawat perempuan di bagian rawat inap. Hasil analisis menunjukkan terdapat hubungan antara time-based conflict (p-value 0,007), strain-based conflict (p-value 0,007) dan behaviour based conflict (p-value 0,026) dengan kinerja pada perawat perempuan di RSUD Dr. R. Goeteng Taroenadibrata Purbalingga.
