Abstrak

Penelitian ini bertujuan untuk mengetahui kinerja Dokter Penanggung Jawab Pasien (DPJP) sebagai staf pengajar oleh peserta Program Pendidikan Dokter Spesialis (PPDS) di Departemen Obstetri dan Ginekologi Rumah Sakit Cipto Mangunkusumo pada bulan Januari hingga Juni 2013 dan faktor-faktor yang mempengaruhinya.

Metode Desain penelitian ini adalah potong lintang menggunakan kuesioner yang sudah divalidasi, dengan responden peserta PPDS di ruang rawat, poliklinik, dan instalasi gawat darurat Departemen Obstetri dan Ginekologi RSCM pada bulan Januari - Juni 2013.

Hasil Penelitian ini menghasilkan 131 kuesioner yang diisi oleh 40 peserta PPDS. Sebanyak 58.78% responden menyatakan kinerja DPJP sebagai pembimbing sudah baik, sementara 46.56% menyatakan fungsi DPJP sebagai pendidik sudah sangat baik. Terdapat hubungan antara lamanya DPJP menjadi konsultan dengan kinerja DPJP, bahwa DPJP yang menjadi konsultan kurang atau sama dengan 10 tahun dinilai memiliki kinerja lebih baik. Terdapat hubungan yang bermakna antara cara komunikasi langsung dan sering dengan kinerja DPJP yang sangat baik. Faktor lain yang dinilai pada penelitian ini, yaitu tahap PPDS, tempat penugasan DPJP, dan jabatan DPJP tidak menunjukkan hubungan yang bermakna.

Kesimpulan Secara keseluruhan, dari ketiga fungsinya, kinerja DPJP dinyatakan baik. Hasil ini dinilai dari 2 sisi yaitu dari faktor DPJP maupun faktor PPDS, dan diketahui bahwa kinerja DPJP dipengaruhi oleh lamanya menjadi konsultan, dan juga intensitas dan cara diskusi dengan PPDS.

.....Objective To assess the performance of Doctors-In-Charge of Patients

(DICPs) as teaching staff by doctors enrolling in the Specialty Doctor Education Program (PPDS) in The Department of Obstetrics and Gynecology of Ciptomangunkusumo Hospital during the period of January to June 2013 as well as to explore the factors influencing their performance.

Study design It is a cross-sectional study using a validated-questionnaire.

Respondents of the study are doctors enrolling in the Specialty Doctor Education Program (PPDS) or generally referred to as residents in the inpatient rooms, outpatient clinic and emergency department of the Department of Obstetrics and Gynecology of Ciptomangunkusumo Hospital (RSCM) on January - June 2013.

Results The study outcome was 131 questionnaires filled by 40 residents. The result showed that 58.78% of respondents stated that the performance of DICP as a counselor had been good, while 46.56% stated that DICP's function had been very good. There was a relationship between the duration of DICP's role as consultants with their performance, in which DICPs who had been consultants for 10 years or less were assessed to have better performances. There was also a significant relationship between the communication method and frequency of DICPs and their performance. Other factors assessed are resident's level of PPDS education, point of DICP's assignment, and job position of DICPs did not show significant relationship.

Conclusion Among its three functions, DICPs' performance was considered as good. The result was assessed from two sides, including DICP factors and residents' factors, and it was known that the performance of DICP was influenced by the duration of their role as consultants; and their intensity of interaction and way of discussions with their residents.
