Abstrak

Mutu asuhan keperawatan dapat dinilai dari pendokumentasian yang dilakukan perawat. Kualitas pendokumentasian dapat ditingkatkan melalui kegiatan supervisi kepala ruangan. Penelitian ini bertujuan mengetahui hubungan supervisi kepala ruangan dengan kualitas dokumentasi keperawatan di Instalasi rawat inap RSU X Depok. Desain penelitian ini adalah deskriptif korelasi dengan pendekatan cross sectional. Sampel penelitian berjumlah 52 perawat pelaksana yang diambil dengan teknik total sampling dan 93 dokumen keperawatan yang diambil dengan teknik consecutive sampling. Instrumen yang digunakan kuisioner valid (0,31) dan lembar observasi dokumentasi Depkes R.I.

Hasil penelitian ditemukan ada hubungan antara pelaksanaan supervisi dengan kualitas dokumentasi keperawatan ($p=0,008$, OR=9,286). Faktor yang paling dominan berhubungan dengan kualitas dokumentasi keperawatan adalah pelaksanaan supervisi. Kepala ruangan perlu meningkatkan frekuensi supervisi pada tindakan keperawatan dan pendokumentasian keperawatan. Perawat melakukan pendokumentasian segera setelah berinteraksi dengan pasien.

.....The quality of nursing care can be assesed from documentation that nurses have done. The quality of documentation can be improved through the head nurse's supervision activity. This study aimed to determine the relationship between supervision of head nurse and quality of nursing documentation in the wards of X Hospital in Depok. This study was a descriptive correlation research with cross sectional approach. A number of 52 nurses were involved using total sampling and 93 nursing documentation were taken using consecutive sampling technique. Instruments used were validated questionnaires (0,31) and documentation observation sheets by Indonesia Ministry of Health.

The research found a relationship between the implementation of supervision and quality of nursing documentation ($p=0,008$, OR=9,286). The most dominant factor related to the quality of nursing documentation was the implementation of supervision. Head nurse needs to increased their frequency of supervision in the nursing actions and nursing documentation. Nurse should be documented immediately after interacting with patients.
