Abstrak

ABSTRAK

Tesis ini membahas tentang kesesuaian pengelompokan tindakan medis pasien Askes di RSUD Puri Raharja, dimana selama periode Juli-Agustus 2013 diketahui masih terjadi 49,2% ketidaksesuaian TMO yang ditetapkan oleh dokter dan PT Askes. Tesis ini membahas hubungan antara variable organisasi dan individu terhadap kesesuaian pengelompokan TMO. Desain penelitian adalah kombinasi metode kuantitatif dan metode kualitatif. Hasil penelitian menunjukkan para pejabat tidak memfasilitasi pertemuan antara dokter dan Askes, para dokter tidak diikutkan dalam setiap tahapan-tahapan dan sosialisasi kerjasama dengan Askes dan tidak ada keterbukaan tentang jasa medis Askes, oleh karena itu pejabat yang berwenang memfasilitasi pertemuan antara dokter dan pihak Askes, melibatkan para dokter disetiap kerjasama dengan pihak ketiga apalagi yang menyangkut TMO dan jasa medis serta menyampaikan secara terbuka perhitungan jasa medisnya.

ABSTRACT

This thesis discusses about compatibility grouping of medical action on Askes patients in the Puri Raharja hospital, where during the period from July to August 2013 are still known to occur 49.2% discrepancy TMO set by doctors and PT Askes. This thesis explores the relationship between organizational and individual variables on the suitability grouping TMO. The study design was a combination of quantitative methods and qualitative methods. Results showed officials do not facilitate meetings between doctors and Askes, the doctors are not included in each of the stages and socialization cooperation with Askes and no disclosure of medical services Askes, therefore the authorities to facilitate a meeting between the doctor and the Askes, doctors involved in each partnership with a third party concerning especially TMO and medical services as well as delivering medical services openly calculations.
