**ABSTRACT
**

The purpose of this research is to analyze the factors that influence the Posbindu. The kind of analytic research study that was used was correlation descriptive with the number of samples 363 people. The research result was obtained by the utilization of Posbindu in the Galanggang village working region of Puskesmas Batujajar in which most respondents (59%) are not active. With factors that are related such as age (p value 0000), education (p value 0000), knowledge (p value 0000), attitude (p value 0000), support (p value 0000), the perception of distance (p value 0000), the perception of the costs (p value 0000), individual assessment (p value 0000). To increase the utilization of integrated Posbindu for seniors, therefore it needs to be formed respectively 1 Posbindu in every community region, the need of traffic locale coordination to provide utilities and facilities, to reward the pupils and to make a schedule with the other health officers and also to make a program planning of other activities such as seniors refreshing, seniors competition so seniors remain in active activities, skillful and productive.
