<b>ABSTRACT</b><br>

Development of non-toll highways Antasari-Blok m very urgent, this is because the density of the volume of vehicles crossing the road, this project concept to creation overpass just above the existing road in order to divert traffic volumes that exist on the existing road and reducing congestion . Because this is a very urgent need, in the science of construction management must pay attention to the factors that influence the selection of appropriate construction methods to complete the construction of non-toll highways Antasari-Blok M.
