ABSTRACT

<p>It has been argued that attitudes and teaching strategies of teachers have positive effect on the successful implementation of inclusive education. This study was set up to examine the relationship between attitudes and teaching strategies of teachers. One hundred inclusive primary school teachers were involved in this research.</p>

<p>The results show that there is no significant correlation between attitudes and teaching strategies of teachers working in inclusive public primary school. On the other hand, it was found that teachers' attitudes in inclusive private primary school has a significant correlation with their teaching strategies. Furthermore, there is a significant difference on cognitive and affective components of attitudes between groups of teachers working in the two types of school. The study reveals that there is no a significant difference on teaching strategies between these groups. Recommendations for future research are discussed in the study.</p>
