Abstrak

Penelitian ini dilakukan untuk mengetahui pengaruh relationship contingency dan orientasi motivasi terhadap desakan menikah pada dewasa muda. Pada penelitian ini, relationship contingency diukur dengan menggunakan Relationship Contingency Subscale, desakan menikah diukur dengan menggunakan Skala Desakan Menikah, dan pemberian priming orientasi motivasi berupa tugas menyusun kata. Penelitian ini merupakan penelitian eksperimental dengan desain 2 x 2 randomized factorial design, between-subjects. Partisipan dalam penelitian berjumlah 133 orang dengan kriteria mahasiswa berusia 20-40 tahun, belum menikah, dan berorientasi heteroseksual. Hasil penelitian ini menunjukkan bahwa relationship contingency dan orientasi motivasi secara terpisah memengaruhi desakan menikah. Tingginya tingkat relationship contingency dan pemberian priming orientasi motivasi terkontrol terbukti memunculkan desakan menikah yang tinggi. Akan tetapi, interaksi antara relationship contingency dengan orientasi motivasi tidak memengaruhi desakan menikah.

.....

This study examined the influence of relationship contingency and motivation orientation to mate urgency among young adult. In this study, relationship contingency was measured by using the Relationship Contingency Subscale, mate urgency was measured by using Skala Desakan Menikah, and primed motivation orientation by using sentence structure task. This study is an experimental research with 2 x 2 randomized factorial design, between-subjects. Participants in this study were college students, within the age range 20-40, unmarried, and heterosexual oriented. Total of participants were 133 people. The result of this study shows that the relationship contingency and motivation orientation separately influence mate urgency. The high level of relationship contingency and primed controlled motivation were proved to influence mate urgency. However, the interaction between relationship contingency with motivation orientation did not influence mate urgency.
