Abstrak

[ABSTRAK

Tesis ini membahas tentang bagaimana hubungan pengetahuan dan sikap dengan niat melaksanakan konseling berhenti merokok di antara mahasiswa profesi dan spesialis kedokteran gigi di RSKGM FKG UI. Penelitian ini adalah penelitian kuantitatif dengan desain potong lintang. Sikap merupakan variabel yang paling besar mempengaruhi niat melakukan konseling berhenti merokok, setelah dikontrol oleh variabel umur, jenis kelamin, pendidikan, status merokok, dan pengetahuan. Nilai OR (OR adjusted) = 59,795 (95% CI 14,777-241,957). Hasil penelitian ini menyarankan agar ada upaya pembentukan sikap terhadap perilaku konseling berhenti merokok melalui pendidikan yang terencana, terarah, dan berkesinambungan.

ABSTRACT

This thesis discusses how the relationship between knowledge and attitudes with the intention of implementing smoking cessation counseling among students of professional and specialist dentistry in RSKGM FKG UI. This research is a quantitative study with a cross-sectional design. Attitude is the biggest variable affecting intention to quit smoking counseling, once controlled by the variables of age, gender, education, smoking status, and knowledge. OR value (OR adjusted) = 59.795 (95% CI 14.777 to 241.957). The results of this study suggest that there are efforts to establish attitudes towards smoking cessation counseling behaviors through education planned, directed, and continuous; This thesis discusses how the relationship between knowledge and attitudes with the intention of implementing smoking cessation counseling among students of professional and specialist dentistry in RSKGM FKG UI.
