Abstrak

[ABSTRAK

Penelitian ini bertujuan untuk mempelajari pengaruh faktor sumber daya kesehatan, lingkungan dan sosioekonomi terhadap harapan hidup saat lahir di Indonesia pada tahun 2012 dengan menggunakan data tahun 2008. Berdasarkan hasil analisis regresi linier berganda diketahui bahwa faktor sumber daya kesehatan (rasio dokter dan pengeluaran kesehatan per kapita), lingkungan (akses terhadap sanitasi layak) dan sosioekonomi (lama sekolah rata-rata dan kemiskinan) mempengaruhi harapan hidup saat lahir.

ABSTRACT

The aim of this research is to study the impact of resources of the health system, environment and socioeconomic factor to life expectancy at birth in Indonesia at 2012 using 2008 data. Results of multiple linear regression show that resources of the health system (doctor's ratio and per capita health care spending), environment (access to improved sanitation) and socioeconomic factor (mean years schooling and poverty) affect life expectancy at birth.
