Abstrak

[ABSTRAK

Tuntutan tugas Bintara Pembina Desa (Babinsa) semakin tinggi dari pimpinan TNI AD. Tugas seorang Babinsa di wilayah perkotaan semakin kompleks, karena karakteristik masyarakatnya yang individualistik, heterogen dan sangat dinamis. Dikaitkan dengan lima kemampuan teritorial yang harus dimiliki oleh Babinsa, ditemukan bahwa kemampuan Babinsa tergolong rendah pada dimensi kemampuan temu cepat lapor cepat di tiga Komando Rayon Militer (Koramil) wilayah kota Bandung, khususnya kemampuan analisis sosial. Dalam jangka pendek, pengembangan kemampuan analisis sosial terhadap Babinsa adalah dengan memberikan kesadaran terhadap setting sosial. Strategi intervensi yang diterapkan adalah teknik appreciative inquiry dan pelatihan, yang direncanakan selama dua jam dalam waktu enam hari kerja. Intervensi dilakukan pada Babinsa di Koramil 'X' sebagai kelompok eksperimen dan terdapat kelompok Babinsa yang menjadi kelompok kontrol. Pengukuran dampak perubahan dari intervensi menggunakan kuesioner pra dan paska pelatihan yang dilakukan sebelum intervensi dan seminggu setelah intervensi pada kelompok eksperimen dan kontrol. Selain itu dilakukan pula pengukuran secara kualitatif berupa wawancara dan focus group discussion. Berdasarkan analisis statistik uji nilai t dengan membandingkan rata-rata dari kelompok eksperimen dan kontrol menunjukkan bahwa terjadi perubahan yang signifikan pada kelompok eksperimen terkait kesadaran Babinsa terhadap perannya dalam setting sosial. Selanjutnya, berdasarkan analisis dampak penerapan program intervensi sejenis terhadap kelompok Babinsa lain diketahui bahwa program intervensi tersebut diprediksi secara signifikan akan memiliki dampak yang besar bila diterapkan pada kelompok Babinsa lainnya yang berada dalam wilayah perkotaan.

ABSTRACT

Villagers NCO (Babinsa) have the higher task demands from the Chief of Army. The task of a Babinsa in urban areas increasingly complex, due to the characteristics of the people who individualistic, heterogeneous and highly dynamic. Associated with the five territorial ability to be possessed by Babinsa in territorial development task, it was found that the ability Babinsa is low on the dimensions reported rapid retrieval capabilities quickly in three-District Military Command (Koramil) Bandung region, in particular the ability of social analysis. In the short term, the development of social analysis capabilities to Babinsa is to bring awareness to the social setting. Intervention strategies are implemented appreciative inquiry techniques and training, planned for two hours within six working days. Interventions performed on Babinsa in Koramil 'X' as the experimental group and there Babinsa group that became the control group. Measurement of the impact of the change intervention using pre-and post-training questionnaires were conducted before the intervention and one week after the intervention in the experimental and control groups. Measurements will

be conducted qualitative interviews and focus group discussions. Based on statistical analysis t test by comparing the value of the average of the experimental and control groups showed that significant changes in the experimental group Babinsa awareness related to his role in a social setting. Furthermore, based on the analysis of the impact of the intervention program similar to other known Babinsa groups that the intervention program significantly predicted would have a great impact when applied to groups other Babinsa located in urban areas.
