Abstrak

Remaja Kecamatan Cilacap Tengah cenderung mengonsumsi minuman keras. Tujuan penelitian mengetahui hubungan peran keluarga dengan konsumsi minuman keras pada remaja. Penelitian analitik korelasi dengan pendekatan cross sectional. Jumlah responden 87 responden dengan total sampling. Data diambil dengan kuesioner dan analisis regresi linier. Hasil penelitian menjelaskan bahwa konsumsi minuman keras pada remaja akan berkurang apabila peran keluarganya baik. Hasil analisa regresi linier berganda dengan uji Anova (uji f) dengan p value = 0,001 ($\alpha < 0,05$). Disimpulkan kecilnya peran keluarga dapat meningkatkan konsumsi minuman keras remaja.

.....

Adolescents in Cilacap Tengah district tend to consume alcohol. This research aimed to determine the relationships between the role of family and peers and consumption of alcohol among adolescents. The research design was analytic correlation with cross-sectional approach. A total sample of 87 respondents were participated in this study. The data was collected using questionnaire and analyzed using regression linier test. The results showed that the amount of alcohol consumption in adolescents reduced when the role of family improved. Multiple regression linear analysis or ANOVA test (F test) showed p value= 0.001 (p value < 0.05). This research concludes that when family could not demonstrate the roles properly, it will likely to result in higher alcohol consumption among adolescent.
