**ABSTRAK**

Kurangnya stimulasi akan berdampak pada keterlambatan perkembangan balita.

Keluarga memegang peranan penting dalam memberikan stimulasi sedini mungkin agar mental, emosional, sosial dan kemandirian balita berkembang secara optimal. Penelitian ini dirancang untuk mengidentifikasi arti dan makna dari pengalaman keluarga dalam menstimulasi perkembangan balita. Desain penelitian yang digunakan adalah fenomenologi deskriptif, menggunakan kriteria sampling purposive, saturasi pada partisipan keenam. Analisa data menggunakan metode Collaizi.

Penelitian menghasilkan enam tema yaitu metode stimulasi, waktu stimulasi, sumber peran dalam menstimulasi, perasaan dalam proses stimulasi, masalah pada sifat balita dan anak lebih baik dari orangtua. Hasil penelitian ini diharapkan dapat meningkatkan kemampuan stimulasi perkembangan balita oleh keluarga

**ABSTRACT**

The lack of stimulation will have an impact on the delay in development of toddlers. Family plays an important role in providing stimulation as early as possible so that mental, emotional, social and survival skills of toddlers would develop optimally. This study was designed to identify the meaning and significance of the family experience in stimulating the development of toddlers.

The research method used was descriptive phenomenological approach, using purposeful or purposive sampling criteria of six participants. Data analysis used Collaizi methods. The results produced six themes namely the method of stimulation, stimulation time, resources role in stimulating, feeling the stimulation process, the nature of the problem in toddlers and children better than their parents. The results are expected to improve the ability of the family in stimulating the development of their toddlers.
