[ABSTRAK

Integritas diri lanjut usia didasarkan pada keyakinan bahwa hidup seseorang telah berguna sehingga memungkinkan individu untuk menghadapi kematian tenang dan hidup yang lebih bermakna. Penelitian ini bertujuan untuk mengetahui pengaruh terapi suportif terhadap integritas diri pada lanjut usia di Kota Bogor. Desain penelitian quasi experimental pre-post test with control group. Sampel berjumlah 70 orang, masing-masing 35 orang kelompok intervensi dan kontrol. Hasil penelitian menunjukkan integritas diri pada lanjut usia meningkat secara signifikan setelah dilakukan terapi suportif ($p\text{-value} = 0,0001 < \alpha; 0,05$). Peringkat integritas diri lebih tinggi pada kelompok yang mendapat terapi suportif dibandingkan kelompok yang tidak mendapatkan terapi suportif ($p\text{-value} = 0,001 < \alpha; 0,05$). Terapi suportif direkomendasikan sebagai terapi keperawatan untuk meningkatkan integritas diri pada lanjut usia di masyarakat.

ABSTRACT

The elderly self integrity based on a belief that one's life have meaning to enable such individual to face death peacefully and a more meaningful life. The purpose of this study was to determine the effects of supportive therapy to self integrity in elderly at Bogor City. The research design was quasi-experimental pre-post test with control group. The sample of this research are the elderly of 70 respondents including 35 respondents in the intervention group and 35 respondents in the control group. The results showed that elderly self integrity significantly after supportive therapy ($p\text{-value} = 0,0001 < \alpha = 0,05$). This research showed significant comparison of the elderly self integrity between group with supportive-therapy and neither ($p\text{-value} = 0,001 < \alpha = 0,05$). Supportive therapy recommended as nursing therapy used to treat elderly.
