Abstrak

[ABSTRAK

Diabetes mellitus adalah penyakit kronik yang banyak terjadi di perkotaan. Komplikasi yang dapat terjadi pada penderita DM jika tidak teratur mengontrol kadar gula darahnya adalah ulserasi diabetikum. Pasien ulserasi diabetikum mengalami kerusakan integritas kulit dan diperlukan penatalaksanaan luka dengan segera untuk mencegah amputasi. Perawatan luka yang dapat dilakukan adalah operasi debridement kemudian luka dibalut dengan balutan yang lembab. Hasil dari analisis ini adalah diperlukan pula manajemen diabetes yang ketat untuk membantu mengatasi luka ulserasi diabetikum. Rekomendasi penulisan ini adalah perlu adanya pendidikan kesehatan kepada setiap pasien ulserasi diabetikum tentang manajemen diabetes.

ABSTRACT

Diabetes mellitus is a chronic disease that commonly happens in urban community. Complication that could happen if blood glucose is uncontrolled is ulcers diabetic foot. Patients with ulcers diabetic foot experience impaired skin integrity and need wound care as soon as possible to prevent amputation. The wound care which we can do is debridement operation, and then wraps the wound with a moist bandage. The result of this analysis is also needed a strict diabetes management to help overcome the ulcers diabetic foot.

Recommendation of this writing is that health education is necessary to every patient of ulcers diabetic foot about diabetes management.;
