

Single-use technology in biopharmaceutical manufacture / edited by Regine Eibl, Dieter Eibl

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20394635&lokasi=lokal>

Abstrak

This book gives an overview of commonly-used disposables in the manufacture of biopharmaceuticals, their working principles, characteristics, engineering aspects, economics, and applications. With this information, readers will be able to come to an easier decision for or against disposable alternatives and to choose the appropriate system. The book is divided into two parts. The first is related to basic knowledge about disposable equipment; and the second discusses applications through case studies that illustrate manufacturing, quality assurance, and environmental influence.
