### Abstrak

This is a concise and nuanced overview of International Humanitarian Law (IHL). The structure is unusual. While the book reflects the state of the law with accuracy and sobriety, it nevertheless shows the idealist and philosophical ambitions of the authors. Legal issues are often discussed within a wider moral and ethical context. The authors add many basics on human rights and the enforcement of international law, which are not directly relevant for IHL, but ensure the reader understands the wider picture. Marco Sassøli, University of Geneva, Switzerland This book provides a clear and concise explanation of the central principles of international humanitarian law (or the law of armed conflict) while situating them in a broader philosophical, ethical and legal context. The authors consider a range of wider issues relevant to international humanitarian law, including its ethical foundations, relationship to other bodies of international law and contemporary modes of enforcement. This helps to develop a richer context for understanding the law of war and a sound basis for examining the changing nature of contemporary armed conflict. The book also discusses important recent decisions by international courts and tribunals, tracks the historical development of humanitarian principles in warfare and considers the legal position of states, individuals and non-state groups. Principles of International Humanitarian Law is an important resource for students of international humanitarian law and International law academics, as well as international humanitarian law practitioners.
