Abstrak

It examines the structure of the syntactic and postsyntactic components of word formation, and the role of hierarchical, featural, and linear restrictions within the auxiliary systems of several varieties of Basque. The postsyntactic component is modeled as a highly articulated system that accounts for what is shared and what exhibits variation across Basque dialects. The emphasis is on a principled ordering of postsyntactic operations based on their intrinsic properties, and on the relationship between representations in the spellout component of grammar with other grammatical modules.
