Aerospace engineering on the back of an envelope

Alber, Irwin E., author

Deskripsi Lengkap: https://lib.ui.ac.id/detail?id=20401921&lokasi=lokal

Abstrak

This book shows step-by-step examples of the physical arguments and the resulting calculations obtained using the quick-fire method. Also demonstrate the estimation improvements that can be obtained through the use of more detailed physics-based back-of-the-envelope engineering models. These different methods are used to obtain the solutions to a number of design and performance estimation problems arising from two of the most complex real-world engineering projects: the space shuttle and the hubble space telescope satellite.
