<b>ABSTRACT</b><br>

The focus of this study is to investigate which factor may influence intention of customer behavior to buy LED light as energy saving lamps in households, viewed from the perspective of theory of planned behavior and Customer Satisfaction. Attitudes and subjective norms and perceived behavior control has insignificant influence towards the intention of customer behavior to buy LED light. Customer Satisfaction toward existing light also influence the intention of customer behavior to buy LED light. Overall the TPB and Customer Satisfaction modal can be use to predict behavior intention to buy LED lights.;The focus of this study is to investigate which factor may influence intention of customer behavior to buy LED light as energy saving lamps in households, viewed from the perspective of theory of planned behavior and Customer Satisfaction.
