[ABSTRAK

Tiongkok merupakan penghasil dan pengguna batu bara terbesar di dunia. Banyaknya penggunaan batu bara menggiring Tiongkok pada krisis energi. Terjadinya krisis energi serta merebaknya dampak buruk energi berbahan bakar batu bara terhadap lingkungan membuat pemerintah Tiongkok mulai menaruh perhatian khusus pada energi terbarukan. Tujuan penulisan makalah ini adalah memberi gambaran umum tentang kebijakan energi terbarukan di Tiongkok, mendeskripsikan faktor-faktor yang melatarbelakangi kebijakan sumber daya energi terbarukan di Tiongkok selama kurun waktu 1996−2010, dan memaparkan program-program yang dijalankan pemerintah Tiongkok terkait penerapan kebijakan sumber energi terbarukan. Tiongkok saat ini menjadi penghasil energi terbarukan terbesar di dunia. Pemerintah Tiongkok menunjukkan keseriusan untuk terus mengembangkan dan mengimplementasikan kebijakan yang lebih ramah lingkungan demi masa depan yang lebih baik.

ABSTRACT

China is the largest coal producer and consumer in the world. The large amount of coal usage leads China to an energy crisis. The Energy crisis and negative excess of coal based energy towards the environment have made the Chinese government pay more attention to renewable energy. The goals of this research are to explain China's renewable energy policy in general; to describe the backgrounds of China renewable energy policy in 1996-2010, and to explain the Chinese government's programs that are related to renewable energy policy. The government of China shows its serious commitment by constantly developing and implementing environmental friendly policies for a sustainable future. , China is the largest coal producer and consumer in the world.
