Abstrak

Asuhan keperawatan klien dengan Ketuban Pecah Dini dengan penerapan teori model Need for Help Wiedenbach dan Comfort Kolcaba menjadi kerangka praktek Residensi keperawatan maternitas selama satu tahun. Laporan ini bertujuan untuk memberikan gambaran asuhan keperawatan pada child bearing normal, risiko tinggi, Bayi baru lahir normal dan risiko tinggi, perempuan yang mengalami masalah reproduksi dan ginekologi yang dilaksanakan pada tatanan klinik maupun komunitas. Hasil residensi menunjukkan bahwa model tersebut efektif dan efisien dalam membantu kelima permasalahan tersebut. Pada kasus KPD dengan terminasi persalinan pada ibu primipara perlu diperkuat dengan teori Mercer untuk membantui ibu dalam pencapaian perannya. Pencapaian kompetensi perawat spesialis maternitas dilakukan melalui penerapan peran perawat secara komprehensif.

.....

Integration of theoretical model Need for Help Wiedenbach with Comfort Kolcaba in nursing care to clients with premature rupture of membrane became framework of maternal health nursing specialist student practice for a year. This report aims to provide an overview of nursing care at risk of normal child bearing, and high risk, normal newborn, and high risk women who experience reproductive problems and gynecology. Which conducted at the clinical and community setting. It showed the both models were effective and efficient to seven client and family with premature rupture of membrane. Client with PROM and primipara need to be strengthened with Mercer theory to help the mother achievement her role. The nurse specialist maternity competencies were achieved through applying nurse roles comprehensively.
