### Abstrak

Sol-gel processing for conventional and alternative energy is a comprehensive source of information on the use of sol-gel processing in materials in energy systems, conversion, storage, and generation.

In addition to examining contemporary processing, properties, and industrial applications, this book identifies materials challenges presented by conventional and alternative energy generation that require new materials and innovative processing. The book provides a state-of-the-art treatment of different aspects of materials for energy production, with a focus on processing, and covers related topics such as carbon sequestration, clean energy, and biofuels.
