

Human Resources and Vaccine Management at Provincial Health Office, District/City Health Office and Primary Health Centre

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20406230&lokasi=lokal>

Abstrak

Background: In the Decree of the Minister of Health on the National Immunisation Movement acceleration Universal Child Immunization 2010-2014 (GAIN UCI 2010-2014) stated that the general problems of decline in immunization coverage and quality of service were caused by several things, one of which is the lack of quantity, quality and distribution of human resource. Methods: A cross-sectional mix-method study to investigate human resources in vaccine management had been conducted in two provinces in 2012. Primary data were collection by interviewing stakeholders thoroughly, secondary data collection and observation were also carried out. Analysis was done by scoring for data concerning education, length of employment, training experience and knowledge. Result: The number of Vaccine management officers are still lacking. While the immunization guidelines required minimal two officers for each health centers. Officers' knowledge in primary health centers is still inadequate, especially in terms of the vaccine and Coldchain (Ice Lined Refrigerators). Officers at Provincial Health Office had been trained in vaccine management, but not all officers at District Health Office and Primary Health Centers have received training yet. Suggestion: This study suggests the addition of the quantity and quality of human resource in vaccine management, because the office can affect the quality of the vaccine, because vaccines need a special handling to maintain the quality to provide immunity and Prevent the occurrence of diseases that can be prevented by immunization (PD3I).
