

Answer set programming for continuous domains: a fuzzy logic approach

Jeroen Janssen, editor

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20406539&lokasi=lokal>

Abstrak

We specifically focus on the following issues: 1. An important question when modeling continuous optimization problems is how we should handle overconstrained problems, i.e. problems that have no solutions. 2. Users of a programming language often want a rich language that is easy to model in. 3. A well-known technique for solving ASP consists of translating a program P to a propositional theory whose models exactly correspond to the answer sets of P .
