

Mineral matter and its identification in Indonesian coal

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20407181&lokasi=lokal>

Abstrak

The mineral content of Indonesian coal is typically low with the average of 5.2%. Pyrite occur in most coals but in areas currently being mined are low. Some of the Pasir and Berau coals in East Kalimantan have moderate to high sulphur content in some plies and this indicates some marine influence.
