

Ciri kimia tanah dan bobot kering beberapa jenis tanaman pupuk hijau dengan memberikan kapur pada tanah masam

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20407328&lokasi=lokal>

Abstrak

This research aims to study the effect of lime addition in acid soil to chemical characteristic of soil and dry weight of green manure crops. The experiment with completely randomized design for factorial 7x2 was used. The first factor was green manure crops consisting of seven level and the second factor was lime addition consisting of two levels. Result shows that the liming can increase pH value from very acid to slightly acid, decrease Al-dd content, decrease Al saturation.
