

The space time and systematic concepts in regional planning : the population aspect

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20408143&lokasi=lokal>

Abstrak

The paper contends that it is possible to synthesise the various studies unilineally relating population processes to regional development into a comprehensive overview within which the process of differential regional development and planning and that of differential population levels can be universally assessed in a system framework. The paper presents a simple planning control system model of regional development based on its process and structure in space and the dynamics of population reactions over time.
